- What we are doing

Coopertation

## Local courses with instructors

- 2022: 610 courses
- Competence to forest owners
- From practical forest workers to tomorrow forest owners

Combined courses with e-learning and practical activities

# The School of forestry

The forestry organization's joint investment in e-learning

The forestry in Norway is a future-oriented competence business which need competence across competition lines and position in the value chain. The actors want to raise the level of forestry competence in all their stages in forestry, through a joint investment in new dissemination technology and inclusive collaboration on course development. This joint investment in e-learning is called SKOGSKOLEN.

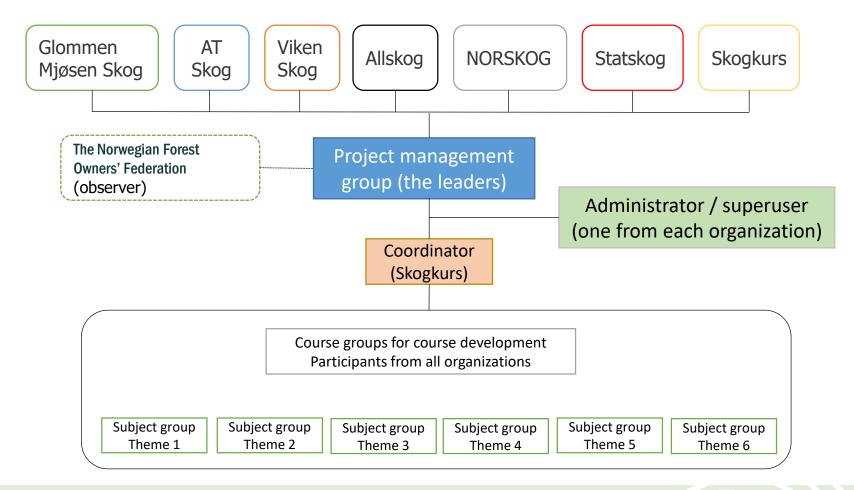

# Moodle offers great flexibility

- Isolated departments «tennants», with full administrative control
- Video and multimedia support
- Powerful test tool
- Powerful reporting tool
- 100/k0/ace Supports additional modules - video meetings, interactive learning content, etc.
- Competence management
- Educational programs, courses and certifications

Competence is the competitiveness of the future

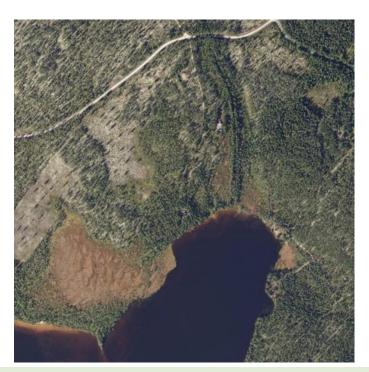

The organizations are now working with a common standard for competence

## **Forests and water**

# **Practical water protection**

 Crossing streams with temporary bridges

Reducing impact on water quality

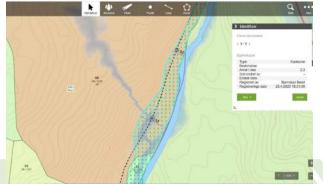

### **Border zones to water**

- No harvesting in border zones to water (normally)
- Important to maintain ecologic functions

# **Border zones with spruce monoculture**

- Unstable zones might be harvested
- Establishing stable zones in next generation

### **Wetland areas**

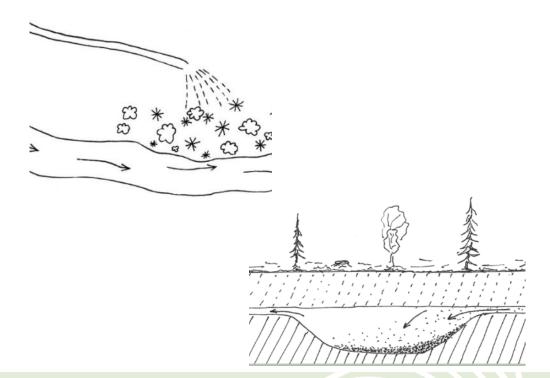

- Areas should be maintained
  - normally no harvesting
- Area not to be drained

# **Draining of forest areas**

- Drainage shall not be led directly into streams or lakes
- Active use of sludge pits

### **Peat forest restoration**

- Reversing historic draining project
- Relevant on areas with little tree growth or challenges with floods

Thank you for the attention!

Bjørn Helge Bjørnstad
